

DORIS SCHATTSCHNEIDER. Folding strips of triangles. Kaleidocycles. The isoaxis. Further exploration. Information on construction materials. E. The Rhombic Dodecahedron: Its Relation to the Cube and the Octahedron, ARTHUR L. LOEB. The pyramids. Construction of the polyhedra. Juxtaposition of polyhedra. Space-fillers. A note on materials (contributed by JACK GRAY). *Part II. Lectures from the Shaping Space Conference.* 3. Regular and Semiregular Polyhedra, H.S.M. COXETER. 4. Milestones in the History of Polyhedra, JOSEPH MALKEVITCH. 5. Polyhedra and Crystal Structures, CHUNG CHIEH. 6. Polyhedra: Surfaces or Solids?, ARTHUR L. LOEB. 7. Spatial Perception and Creativity, JANOS BARACS. 8. Why Study Polyhedra?, JEAN PEDERSEN. Jennifer's puzzle. Jennifer's instructions. How to make the puzzle pieces. Assembling the polyhedra. Putting the puzzle together. Variations and modifications. *Part III. Roles of Polyhedra in Science.* 9. Form, Function, and Functioning, GEORGE FLECK. Does form explain function? Science looks to geometry for models. Plato's ideas. Spheres and polyhedra as models for matter. Spheres and whirlpools as models for atoms and molecules. Polyhedra as models for atoms, molecules, and viruses. Modeling condensed matter. Packing of spheres of various sorts. Polyhedra as models for plant structures. Does form explain dynamic functioning? Science looks to geometry for mechanistic models. Plant growth and polyhedral transformations. Polyhedral models for self-assembly of viruses. Robotics and motions of polyhedra. Polyhedron theory accommodates changing expectations. 10. Polyhedral Molecular Geometries, ISTVÁN HARGITAI AND MAGDOLNA HARGITAI. Boron hydride cages. Polycyclic hydrocarbons. Structures with a central atom. Regularities in nonbonded distances. The VSEPR model. Consequences of intramolecular motion. *Part IV. Theory of Polyhedra.* 11. Introduction to Polyhedron Theory, MARJORIE SENECHAL. What is a polyhedron? Why a theory of polyhedra? Polyhedral themes. A word of warning. Notes. 12. Combinatorial Prototiles, EGON SCHULTE. Nontiles. Constructions of monotypic tilings. 13. Duality of Polyhedra, BRANKO GRÜNBAUM AND G.C. SHEPHARD. 14. Polyhedral Analogues of the Platonic Solids, J.M. WILLS. Platonohedra. Construction of the platonohedra. Regular polyhedra. The flag diagram. 15. Uniform Polyhedra from Diophantine Equations, BARRY MONSON. Interlude. Uniform polyhedra with icosahedral symmetry. 16. Torus Decompositions of Regular Polytopes in 4-Space, THOMAS F. BANCHOFF. Decompositions. The cube and its associated polyhedra. The hypercube and its associated polytopes. Fold-out decomposition of the hypercube and 24-celi. Cartesian and torus coordinates. Coordinates for polyhedra and polytopes. The Hopf mapping. The Hopf decomposition of the hypercube. Torus decomposition of the 24-cell. Conclusion. 17. Convex Polyhedra, Dirichlet Tessellations, and Spider Webs, PETER ASH, ETHAN BOLKER, HENRY CRAPO, AND WALTER WHITELEY. Cell decompositions and reciprocal figures. Spider webs and projections. The main result. Realizations of abstract graphs. Infinite plane examples. Notes. 18. Unsolved Problems. A. Can Neighborly Polyhedra Be Realized Geometrically?, JOHN REAY. Historical Background. Unsolved Problems. B. How Many Faces Does a Polytope Have?, MARGARET BAYER. C. Problems on the Realizability and Rigidity of Polyhedra, WALTER WHITELEY. Realizability. Infinitesimal rigidity. Unique realizability. Dihedral angles and locally unique realizability. Concluding remarks on the design of spatial polyhedra. D. Problems Concerning Polyhedral 2-Manifolds, PETER GRITZMANN. E. Extending the Conway Criterion, DORIS SCHATTSCHNEIDER. *Part V. Further Steps.* 19. Polyhedra and Curriculum? MARJORIE SENECHAL AND GEORGE FLECK.

Combinatorial Geometries, Edited by Neil White (Cambridge University Press, Cambridge, New York, New Rochelle, Melbourne, Sydney 1987) 212 pages.

1. *Coordinatizations*, Neil White. 1.1 Introduction and basic definitions. 1.2 Equivalence of coordinatizations and canonical forms. 1.3 Matroid operations. 1.4 Non-coordinatizable geometries. 1.5 Necessary and sufficient conditions for coordinatization. 1.6 Brackets. 1.7 Coordinatization over algebraic extensions. 1.8 Characteristic sets. 1.9 Coordinatizations over transcendental extensions. 1.10 Algebraic representation. 2. *Binary Matroids*, J.C. Fournier. 2.1 Definition and basic properties. 2.2 Characterizations of binary matroids. 2.3 Related characterizations. 2.4 Spaces of circuits of binary matroids. 2.5 Coordinatizing matrices of binary matroids. 2.6 Special classes of binary matroids; graphic matroids. 2.7 Appendix on modular pairs of circuits in a matroid. 3. *Unimodular Matroids*, Neil White. 3.1 Equivalent conditions for unimodularity. 3.2 Tutte's Homotopy Theorem

and excluded minor characterization. 3.3 Applications of unimodularity. 4. *Introduction to Matching Theory*, Richard A. Brualdi. 4.1 Matchings on matroids. 4.2 Matching matroids. 4.3 Applications. 5. *Transversal Matroids*, Richard A. Brualdi. 5.1 Introduction. 5.2 Presentations. 5.3 Duals of transversal matroids. 5.4 Other properties and generalizations. 6. *Simplicial Matroids*, Raul Cordovil and Brent Lindström. 6.1 Introduction. 6.2 Orthogonal full simplicial matroids. 6.3 Binary and unimodular full simplicial geometries. 6.4 Uniquely coordinatizable full simplicial matroids. 6.5 Matroids on the bases of matroids. 6.6 Sperner's lemma for geometries. 6.7 Other results. 7. *The Möbius Function and the Characteristic Polynomial*, Thomas Zaslavsky. 7.1 The Möbius function. 7.2 The characteristic polynomial. 7.3 The beta invariant. 7.4 Tutte–Grothendieck invariance. 7.5 Examples. 7.6 The critical problem. 8. *Whitney Numbers*, Martin Aigner. 8.1 Introduction. 8.2 The characteristic and rank polynomials. 8.3 The Möbius algebra. 8.4 The Whitney numbers of the first kind. 8.5 The Whitney numbers of the second kind. 8.6 Comments. 9. *Matroids in Combinatorial Optimization*, Ulrich Faigle. 9.1 The greedy algorithm and matroid polyhedra. 9.2 Intersections and unions of matroids. 9.3 Integral matroids. 9.4 Submodular systems. 9.5 Submodular flows.
